Internships/Projects

Vooly Android App - MetaWings Technologies

Duration: 2 months

Technologies Learned: Java, XML, Android SDK, Firebase SDK and Gradle

Description: Vooly is a microblogging social networking platform built for India. It allows easy creation and publishing of content.

My Responsibilities: I was a part of its Android App development team. Developed Front end and middle layer of "Stories" components of it independently.

Money Android App - Self

Duration: 3 months

Technologies Learned: Java, XML, Android SDK, Firebase SDK and Gradle

Description: Money App makes use of SQL databases to maintain the data. Helps users to maintain a record of their financial transactions amongst their contacts. User can also add comments to remember purpose of the transaction.

My Responsibilities: I was the sole developer in this project. I handled everything from UI to the app logic, and the client to the server side.

MyMissionAdmission - Anhad Edutrain Pvt. Ltd.

Duration: 4 months

Technologies Learned: HTML5, CSS3, AngularJS and JQuery

Description: Online portal for students to make the process for admissions easier and bring more opportunities.

My Responsibilities: I lead the design team of 5 members. Developed U/X, Frontend for Dashboards, Profile Views and Landing Page for the mymissionadmission.com website.

Frends 2 - Self

Duration: 2 months

Technologies Learned: HTML5, CSS3, Twitter Bootstrap, Javascript, JQuery and PHP

Description: Frends 2 is the second version of the Frends portal. This portal was specially designed for my friends. We can share our photos, secrets and moments. Some additional features were also planned but they were not implemented.

My Responsibilities: I was sole developer in this project. All the functionality including the user interface was done by me.
